EDDY CURRENT CLUTCH/BRAKE SAFETY CONTROLLER

CIECO announces their release of a press safety clutch/brake controller to interface with an eddy current clutch/brake system.

The CIECO Automator II eddy current clutch/brake press control module is the only dedicated system available to provide safety compliant operation for presses using eddy current clutch/brake controllers.

Most presses using eddy current clutch/brake controllers were operating outside of OSHA and ANSI safety regulations for power presses. Now with the Automator II interface, you can comply with the latest safety standards and still maintain the speed regulation and features of your eddy current controller.
