FOR IMMEDIATE RELEASE:

CIECO announces the release of their machine **Efficiency Analysis Reporting System**.

EARS is a wireless or Ethernet machine monitoring system that will monitor and log production information to a database. You can view real time data on your PC for up to 75 machines. Data is saved and can be used to produce custom reports in Excel, Access or Crystal such as parts per minute, parts per machine, parts per shift, up time, down time, etc. It's easy to retrofit, does not require custom hardware or software and is independent of any other machine control.

Visit our EARS video demo at <http://www.ciecocontrols.com/video.cfm?id=13> to see report charts and more information on **EARS**.
